

# BEAM\*2022

## Biosolids Management GHG Calculator

Nicholas Leblanc, Englobe  
Bobbie Thoman, NOCO  
NEBRA Carbon Trading Committee

Canadian Residuals & Biosolids Conference  
September 19<sup>th</sup>, 2022  
Niagra-on-the-Lake, ON

**Biosolids GHGs**  
formulas to mitigate climate change

## North East Biosolids & Residuals Association

- ▶ US States: Maine, Vermont, New Hampshire, Massachusetts, Rhode Island, Connecticut
  - ▶ Canadian Provinces: Quebec, Nova Scotia, New Brunswick, Newfoundland & Labrador, Prince Edward Island
  - ▶ **Mission:** to cooperatively promote sustainable diversion, recycling and beneficial use of biosolids and residuals from the municipal and industrial sectors
- ▶ Committees Include:
    - ▶ Research
    - ▶ Residuals
    - ▶ Reg-Leg
    - ▶ *Carbon & Nutrient Trading*

# Why did NEBRA take on BEAM\*2022?

- ▶ Help address the challenges of inventorying GHGs including:
  - ▶ Inconsistent use of methodologies - BEAM is a consistent, widely used model for biosolids management
  - ▶ Unavailable or unreliable emissions factors - BEAM\*2022 provides peer-reviewed updates of default emissions factors and assumptions, making for reliable estimates of GHG emissions from biosolids management.
- ▶ Updates to BEAM needed to reflect current emissions factors, default values and references
- ▶ Additional modules developed by practitioners for new unit processes (e.g., pyrolysis) needed to be incorporated

BEAM\*2022 and the new [www.BiosolidsGHGs.org](http://www.BiosolidsGHGs.org) are made possible...

*Applause for these supporters who made BEAM\*2022 and this website happen. Thank you.*

# What is the Biosolids Emissions Assessment Model (BEAM?)

- ▶ Excel spreadsheet
- ▶ Calculates net GHG emissions and sinks for different biosolids treatment and end use options
  - ▶ Does not address all WRRF, utility emissions - just for solids
- ▶ Estimates Scopes 1, 2, 3 & biogenic CO<sub>2</sub> emissions
- ▶ Uses detailed emissions factors from published literature
  - ▶ As specific as possible to different biosolids materials
- ▶ Original published in 2010, 2011, from project by Canadian Council fo Ministers of the Environment (CCME).

Unit Process	Enter "x" for all applicable processes:	Scope 1	Scope 2	Scope 3	Total	Wet tons to each unit process/day	Mg (wet) to each unit process/day	Dry metric tons to each unit process/day	Biogenic CO <sub>2</sub> dry metric ton biosolids
Storage	x	NA	NA	NA	NA	NA	NA	NA	NA
Conditioning/Thickening	x	0	#VALUE!	117	#VALUE!	NA	NA	NA	NA

**Biosolids GHGs**  
formulas to mitigate climate change

# Original BEAM purpose

(from CCME User Guide, 2009)

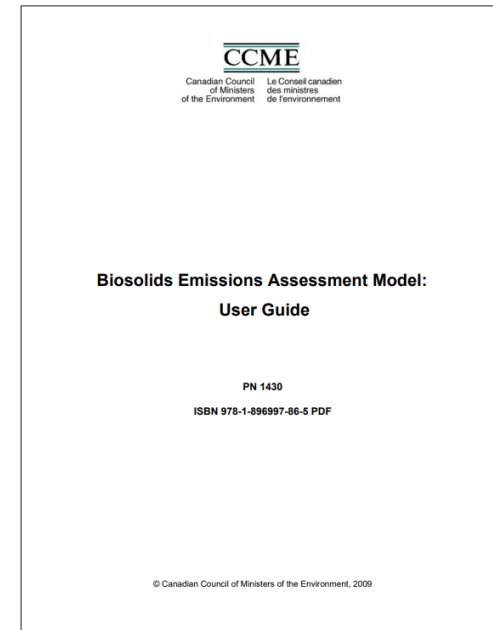

The model can be used to:

- ▶ **estimate a program's GHG emissions, including establishing a baseline**
- ▶ **compare different biosolids management scenarios**
- ▶ **estimate impacts from changes in biosolids management**
- ▶ **understand the factors that have the greatest impact on GHG emissions**

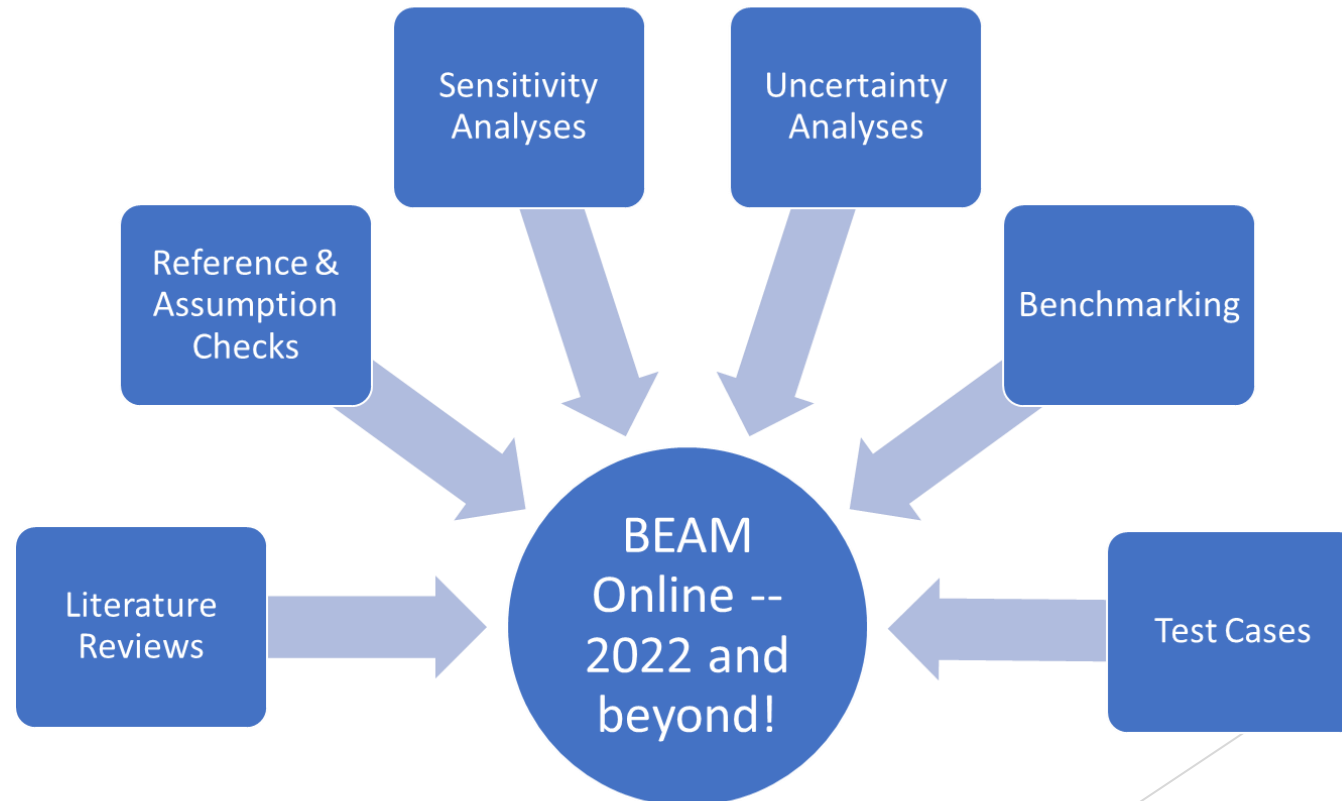

# BEAM - Background & History

- ▶ 2008 - 2009: BEAM created under contract from Canadian Council of Ministers of the Environment (CCME) by
  - ▶ Sylvis (Mike van Ham, Mark Teshima, John Lavery); with assistance from:
    - ▶ Sally Brown (Univ. of WA)
    - ▶ Andrew Carpenter (Northern Tilth)
    - ▶ Ned Beecher (NEBRA)
- ▶ 2009: BEAM 1.0 & User Guide published by CCME
- ▶ Oct. 2010: BEAM 1.1, paper, & supplemental material by Brown et al. in *Env. Sci. & Tech.*
- ▶ 2011: CCME publishes BEAM 1.1
- ▶ 2021: CCME allows updates but is no longer formally involved
- ▶ 2021: Effort to update BEAM merged with Northwest Biosolids online GHG calculator project

# BEAM\*2022 Review Process

- ▶ Annual reviews by the Science Review Team (SRT)
  - ▶ Annual updates to BEAM (e.g. BEAM\*2023)
- ▶ Modules for new technologies typically developed as part of a project

# The Reviewers - thanks!

- ▶ 2022 Science Review Team (all PhDs)
  - ▶ Sally Brown (University of Washington)
  - ▶ John Willis (Brown & Caldwell)
  - ▶ Emma Shen (Jacobs)
  - ▶ Céline Vaneeckhaute (Université Laval)
  - ▶ Mike Badzmierowski (Virginia Tech/  
Oregon Department of Agriculture)

BEAM\*2022

# BEAM\*2022 Updates Include:

- ▶ Up to 10 scenarios can be compared side by side
- ▶ More options for unit processes
- ▶ Key factors and calculations have been reviewed and updated based on more-recent published literature
- ▶ Updated user guide
- ▶ Default values and suggested ranges included
- ▶ List of changes from prior versions

Goal: Available by end of September 2022

# High Priority Topics for SRT Review for BEAM\*2022

- ▶ Anaerobic digestion process details (%VSR, SRT)
- ▶ Carbon sequestration of land applied biosolids
- ▶ Fugitive CH<sub>4</sub> from biogas combustion (engines, flares)
- ▶ Electricity & heat efficiency from internal combustion engines
- ▶ Fertilizer offsets
- ▶ N<sub>2</sub>O from combustion & land application

# High Priority Topics for SRT Review for BEAM in 2023

- ▶ Fertilizer offsets (GHG emissions from commercial fertilizer production)
- ▶ N<sub>2</sub>O from combustion
- ▶ N<sub>2</sub>O and methane from land application
- ▶ Fugitive CH<sub>4</sub> emissions from Anaerobic Digestion
- ▶ Carbon sequestration values

## The Larger Impacts of Biochar from Biosolids: CO2 Reductions Using The BEAM Model, The Elimination of Contaminants of Emerging Concern, and the Creation of a Superior Product for Land Application

Bioforcetech Corporation May 10, 2021 · 15 min read

### Introduction

Sustainability, toxicity, and increased regulations are forcing wastewater treatment plants (WWTP) to reevaluate the way they manage and dispose of the solid residuals derived from their processing. The long-held practices of our industry have left many of us unsure of how to best prepare for the necessary shifts in our management strategies. Simultaneously

### About

This website provides information, data, and a calculator - BEAM\*2022 - to help biosolids management programs reduce their greenhouse gas (GHG) emissions (carbon footprint)... The original Biosolids Emissions Assessment Model (BEAM) was published by the Canadian Council of Ministers of the Environment (CCME) in 2009/2010. Building on that, with OCME permission, and with input from multiple experts & stakeholders, NEBRA & NW Biosolids present BEAM\*2022 and supporting information...

### Sharing Data & Experiences

Share your GHG emissions data, calculations, experiences, & tracking. By compiling and sharing, the biosolids profession will improve understanding and consensus regarding baselines and best practices, creating comparable data and outcomes. This may lead to the ultimate goal of creating formal methods for carbon trading.

Share now

# Future?

- ▶ BEAM\*2022 becomes the consensus method for calculating GHG emissions from biosolids management
- ▶ A resource hub with crowd-sourced supporting information & examples
- ▶ Respected source for biosolids-specific emissions/reductions/sequestration factors
- ▶ Eventually helping develop protocols and working with registrars to allow for marketable carbon offsets

# NEBRA Membership

- ▶ Biosolids/residuals managers from Quebec, Atlantic Provinces - you need NEBRA!
- ▶ **NEBRA needs more Canadians!**
- ▶ Carbon-Trading Committee
- ▶ Your input welcome & needed.
